DETAILED ACTION
EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Jay M. Finkelstein (Reg. No. 21,082) on 07/02/2010. The application has been amended as follows: **Independent Claim 1** has been amended as shown below. Claims 1, 2, 4-8 and 17 have been numbered 1-8 respectively. Claims 15 and 16 have been cancelled as per the interview with the Applicant's representative.

Claim 1: (Currently amended) A method for analyzing the interference and coverage situation in a UMTS subnetwork having a plurality of base stations, each base station having an assigned scrambling code SC, comprising the steps:

acquiring measurement data with a measuring instrument within specified area elements of a defined area, wherein, in each area element, the measurement data including the received signal power of at least one downlink pilot channel of multiple base stations that can be received in this area element, and the total background noise power in the analyzed frequency band, said step of acquiring being carried out only while the subnetwork is without traffic load, and wherein the measurement data includes a received pilot channel power E_c , a total background noise power I_o present in a given frequency band of 5 MHz, and a ratio E_c/I_o , which thus define the measured power of the pilot channel in relation to total interference signal power;

detecting the scrambling code SC of each base station with the measuring instrument;

allocating the acquired measurement data to a base station via a detected scrambling code SC assigned to which base station;

identifying one of the base stations as a Best Server, based on the acquired measurement data; and

preparing an interference matrix based on the acquired measurement data, wherein for the preparation of the interference matrix for each area element, base stations having a power lying in a 10 dB window below the power of the Best Server are registered as interferers, and base stations that are necessary for a Soft Handover, SHO, are not rated as interferers, wherein the interference matrix reflects a statement regarding the interference relationship of each base station with other base stations,

said E_c being determined after correlation reception by considering an orthogonality factor of one rake finger.

Claim 15: (Cancelled).

Claim 16: (Cancelled).

Allowable Subject Matter

Claims 1, 2, and 4-8 are allowed. The following is an examiner's statement of reasons for allowance: Consider independent claim 1, the best prior art of record found during the examination of the present application are: **O'Byrne et al. Compared to the present application neither of the above references neither alone or in combination disclose the technical features of the claimed invention in

context or as a whole. Hence, the present application is allowable. Accordingly, Applicant's invention is allowed for these reasons and the reasons stated by the Applicant in the Amendment/Remarks. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
